

Meeting purpose, goals, and exec presentations

- Set expectations with executives on what's to come and avoid last-minute calendar requests.
 - Want a sneak peek of materials in advance for Rick and Speaker1 to ensure alignment before presenting to execs.
 - Next steps include forward planning after the executive presentation and getting the second SOW approved (not necessarily hinging on it).
-

Sneak peek: survey results and key findings

- Plan to present initial survey findings as a sneak peek to get feedback and ensure results mirror leadership views.
 - Early summary: many franchises use ABC and are satisfied with billing and check-ins, but member-facing experience and data integration are lacking.
 - Majority of respondents appear to be month-to-month with ABC (estimated ~59–60%), making migration risky due to data concerns and tenure on the platform.
-

Data quality, sample size, and segmentation concerns

- Survey responses: 31 responses across 34 (some franchises responded multiple times) — results may be skewed by respondent mix. Need breakdown of respondents vs. franchisees.
 - Need deeper data: number of clubs per franchise and average members per club to analyze relationships (e.g., whether larger clubs use ABC).
 - Action: pull franchise/club-level analytics (total member count, members per club) to correlate platform usage and club size.
-

Areas of weakness to prioritize

- Member experience rated low (~3/5); tech stack does not support a good member experience.
- Reporting and analytics also rated low; franchises feel they are not getting necessary

data across platforms.

Competitive landscape / "best in class" analysis

- Added to SOW: review competitive landscape and best-in-class examples following copy/paste and best-in-class discussions.
 - Intention to include examples of what other brands are doing as part of the deck.
-

Logistics & presentation mechanics

- Today's deck is work in progress; team will take another week to extract the "meat" of the survey.
 - Mike to speak to next phase and SOW timelines and presentation planning.
-

Miscellaneous operational notes (amenities & respondent surprises)

- Noted amenities breakdown (example: 25 franchises have a smoothie bar); some amenity counts surprised participants.
-

Platform Usage / Survey Data Validity

- Need to investigate duplicate responses and multiple people listed on same location (Hapana/Havana, Kimberly) to explain counts.
 - Suggest cross-referencing "what platform are you on?" responses and zip codes to identify if triplicate entries are from same employees.
 - Aggregate the data and dig in so numbers are explainable before making decisions.
 - Concern that Brad and Danny may lose interest if data isn't validated and useful for forward planning.
-

Survey Value and Findings

- Overall feedback is useful and meets expectations, but design/data interpretation

questions deferred to Ashley who has survey experience.

- Much of the survey confirms existing assumptions; focus should be on new insights vs. confirmations.
 - Question whether there were any "gotchas" or surprising findings beyond confirmations.
-

ABC (Billing/Payments Vendor) Sentiment

- Paradox: "Everybody hates ABC, but they're happy with ABC" — core functions work despite negative sentiment.
 - Day-to-day billing and payment processing generally work and are reliable; issues are often specific (invalid cards, some members not included).
 - Franchisees complain about fees (6–8%) but still rate recurring billing near 4/5; possible that survey didn't ask about dissatisfaction with fees directly.
 - Reconciliation of fees vs. billed charges is a recurring pain point and source of confusion.
 - Acceptance of ABC may be due to risk/pain of switching rather than satisfaction—contentment rather than enthusiasm.
-

Member Experience & Product Pain Points

- Member experience scores are lower; billing/payment and member management are satisfactory but member experience needs improvement.
 - Operations pain point noted: reconciliation.
-

Strategic Direction / Internal Sentiment

- Internal strategic stance: build for the future of Gold's Gym regardless of franchisees' current platforms.
 - Initial aim to incorporate franchisee input appears subordinate to strategic anchor of platform standardization.
-

Strategic Direction / North Star

- Want to drive the future direction rather than only analyze past behaviors; focus on future trends and brand differentiation.
 - Use past analysis to learn from mistakes, cover needs/pain points, and inform which services the franchise should adopt.
-

Build vs Buy vs Hybrid Architecture

- Hybrid approach (assemble best-in-class components plus targeted custom development) is preferred over full ground-up build or pure off-the-shelf.
 - Present options (e.g., Option A: aggregate best-in-class; Option B: differentiate with custom pieces) to decide tradeoffs.
 - Building a full billing or core system in-house is undesired due to complexity and scale required.
-

API and Data Layer / Integration Challenges

- A robust API suite from core vendors is critical to enable online upgrades, mobile app integration, and data aggregation.
 - Data silos across best-of-breed systems are a primary challenge; need a data layer/warehouse to stitch systems together.
 - Vendor APIs today are often poor but improving; openness is necessary for SaaS survival.
-

Current Systems and Vendor Experience

- Existing core providers (MotionSoft, Daxco) handle nuts-and-bolts functions (check-in, billing) adequately but have cumbersome APIs.
 - The organization currently relies on APIs and external integrations (online, kiosk, mobile) rather than selling through vendor interfaces.
-

Deliverables, SOWs, and Timeline / Next Steps

- Team discussed combining Phase 1 and Phase 2 SOWs into a single SOW with timing and costs for presentation.
 - Preference to present findings and SOW before HFA; HFA will be a touchpoint to meet but schedule is tight.
 - Proposed internal timeline: finalize combined SOW and full architecture roughly end of April / beginning of May (~6–7 weeks from current stage).
 - Request to share current data draft even if in flux for early review/feedback.
-

Scheduling presentations and next steps

- Need a one-on-one with Brad next week to provide updates, next steps, and scheduling details for presentations the week of the 9th–13th; require 4–5 days' notice to assemble participants.
 - Speaker8 will share a drafted email with dates (already shared with Matt) and follow up this weekend.
 - Presentation of discovery/findings can be virtual; in-person sessions are planned for the next phases (constructed conversations, architecture/blueprint).
 - Speaker8 proposed the week of the 23rd for follow-ups; open to feedback on that timing.
-

Franchisee profile and support functions overview

- Request to include a franchisee profile/overview that maps typical franchisor functions (customer care, billing, support, collections, cancellations) to show where resources are lacking and need to grow.
-

Organizational structure, roles, and governance

- Need an org structure framework showing roles/responsibilities (CIO/CTO equivalents) and a cabinet of leaders around the CEO to drive brand-level decisions and prevent siloed actions.
- Current lack of a C-suite and unclear authority: head of IT feels parity with SVPs and lacks enforcement power to prevent siloed initiatives.
- Desire for consultants to validate that core departmental leadership (5–6 heads) and

governance are required to avoid uncoordinated decision-making.

- Distinguish layers: central franchisor organization vs. support for 49 corporate clubs; need clarity on distributed vs. centralized services and vendor roles.
-

Breaking silos and integrating technology decisions

- Problem: departments (operations/fitness) introduce platforms without involving IT/digital, causing integration and governance gaps. Requirements may be owned by ops, but platform ownership should fall under IT/digital.
 - Need the agency/technology teams involved early in all critical conversations; consultants should emphasize inviting Ryan/Rick (IT/digital leads) into projects early.
 - Shadow IT and ad-hoc vendor/experimental solutions are ongoing risks; governance and decision strategy must address shadow IT while recognizing it won't fully stop.
-

Strategic phase inclusion

- Include centralized vs. decentralized service decisions and IT governance in the strategic phase; define where vendors support centralized or distributed models.
-

Visibility and Governance for Local Experiments

- Need visibility into small operator experiments so tech can guide and prevent last-minute gotchas.
 - Build a governance framework that allows experiments but ensures they are known, quantified, and visible.
 - Operators will continue pushing for sales; governance should enable experiments while protecting broader systems.
-

Upcoming Tasks, Calendars, and Planning Phase

- Prepare a task list and timeline to present to Brad showing what's happened and what's next over the next 2–3 weeks.
- Provide specific upcoming tasks, dates, and meeting agendas so stakeholders can

schedule and commit time.

- Deliver SOW for the next phase to enable paperwork/approval and quicker payment.
-

Meeting Structure for In-Person Strategy Sessions

- Define meeting structure for week of the 23rd: agenda, hours per day, number of days—be precise to secure attendance and accountability.
 - Require published outline with topics, time per topic, and required resources; emphasize the need for mandatory time commitments (e.g., 12 hours over two days).
 - Plan to get team in office the week after HFA; coordinate schedules with external partners (e.g., MotionVibe).
-

Deliverables: Executive Summary vs. Detailed Web Format

- Produce an executive-summary deck (top confirmed items, top gotchas, takeaways) for C-level consumption.
 - Keep the full, contextual material in a navigable format (web-like) for deeper exploration and nuance.
 - Brad will want cliff notes (one-page summary) pointing to detailed sections for drilling down.
-

Member App Strategy: MotionVibe vs. Demo2/Tomotu

- Concern about ops being enamored with Demo2/Tomotu's quick PT-focused delivery; cautious about relying on a startup whose priorities may change.
 - MotionVibe is presented as a more complete, long-term member-experience solution compared to Demo2, which is focused on PT and is currently heavily dependent on this customer.
 - Ops may be pushing tools beyond their scope; need tech leadership to assert that app/member-experience decisions run through technology.
-

Internal Alignment and Tech Authority

- Tech needs stronger agency within the organization; messaging that decisions should route through technology must be repeated and documented.
 - Leadership (Ryan and others) pushing for tech-backed authority; team commits to supporting that stance.
-

Rollout to Franchises vs. Internal Testing

- Concern that leadership wants to present to franchises before testing at scale within own clubs; these are effectively two different apps not yet combined.
 - Urgency to pause or reassess rollout until internal alignment and testing occur.
-

Need for Organizational Alignment and Decision Authority

- Critical weeks ahead to either slow rollout in areas and get organization to agree on direction.
 - Ryan is pushing to be promoted to CTO or given authority to be in every crucial conversation to guide decisions and temper choices.
 - Without centralized decision authority (franchisor-level approvals), brand-wide consistency will be lost.
-

Project Selection Process and Product Ownership

- Existing pattern: operations picks a product with an end date rather than defining the problem and engaging product to select an appropriate solution.
 - Preference expressed for a product-led approach where product helps choose solutions based on defined problems.
-

Upcoming Tasks, Meetings, and Accountability

- Request for specific upcoming tasks, dates, agendas, and summaries to build confidence and hold people accountable for attending meetings.
- Suggestion of meeting on the 23rd and need to confirm date and circulate summary to ensure participation.
