Purpose-built coverage across every operational area.

A category-by-category view of how ABC Fitness meets the RFI requirement set.

#	CATEGORY	STATUS	HIGHLIGHT	MET
5.1	Member Lifecycle & Retention	Native	Catch churn before it happens	21/21
5.2	Plans & Pricing	Configurable	Launch pricing without waiting on IT	9/9
5.3	Billing, Payments & Collections	Native	Payments that don't break at scale	52/52
5.4	Check-In & Access	Configurable	One member experience, everywhere	10/10
5.5	Travel Pass / Multi-Location	Mixed	Members go anywhere; every visit is tracked	6/6
5.6	POS & Retail	Native	Retail revenue tied to the member record	9/9
5.7	Reporting & Analytics	Native	Answers in minutes, not a Friday spreadsheet	30/30
5.8	Communications	Native	Reaching members through their preferred channel	7/7
5.9	CRM	Native + API	Keep the CRM already in place	8/8
5.10	Mobile App	Configurable	One branded experience, not five app vendors	15/15
5.11	Platform & Security Standards	Native	Infrastructure that stays out of the way	12/12
5.12	Corporate, B2B & Emerging Revenue	Partial	Live today, expanding through H2 2026	16/34
5.13	Workforce & PT Management	Partner	Payroll that matches what happened in class	31/31
5.14	Group Fitness & Scheduling	Partner	A class is never left uncovered	43/43

WHAT'S AHEAD Gamified member engagement (mobile + scheduling) — target Q3 2026 · CRM platform migration (Gymsales → Xlerate) — 2027

Less busywork. More retained revenue.

5.1 LIFECYCLE

Catch churn before it happens

Handling member enrollment, freezes, cancellations, and win-back outreach end to end.

NATIVE

- Enrollment, freeze, cancellation, and reactivation are native workflows; win-back offers trigger automatically through an integrated retention partner at cancellation.
- Profile changes sync across every connected system in under a second, so retention and billing always act on current status.

21 of 21 requirements met

5.2 PLANS & PRICING

Launch pricing without waiting on IT

Configuring and governing plans, promotions, and franchise-level pricing controls.

CONFIGURABLE

- Plans configure at the brand, franchise, or club level with min/max pricing ranges, promo windows, and \$0 or comped agreements — no workaround required.
- Legacy plans stay active for admin use without cluttering the club view; PT and add-on packages carry their own pricing and billing cadence.

9 of 9 requirements met

5.3 BILLING

Payments that don't break at scale

Running billing, payments, and collections reliably and transparently at scale.

NATIVE

- A cloud-native, API-first platform processes 10M+ invoices an hour, with configurable billing cycles, real-time validation, and a full audit trail.
- Intelligent Billing uses AI/ML to pick the best retry day for a failed payment; enterprise master-payer billing for corporate accounts is in active development.

52 of 52 requirements met

One experience — no matter the location.

5.4 CHECK-IN / ACCESS

One member experience, everywhere

Validating and enforcing member access consistently across every location.

CONFIGURABLE

- Sub-second check-ins validate 60+ scenarios in real time, with visual/audible staff alerts, full audit logging, and hardware integrations (ABC ACS, Member365, Gantner).
- A dedicated Kids Club workflow tracks dependent check-ins and duration separately from the member's own access.

10 of 10 requirements met

5.5 TRAVEL PASS

Members go anywhere. Every visit is tracked.

Tracking, reporting, and reconciling cross-location visits between clubs.

MIXED

- Remote Check-ins let members access clubs outside their home franchise group, with membership type controlling which clubs, days, and times apply.
- Cross-location settlement between clubs isn't automated today — visits are trackable, but funds aren't reconciled between locations.

6 of 6 requirements met

5.6 POS / RETAIL

Retail revenue tied to the member record

Integrating retail sales with the member record and managing inventory.

NATIVE

- 100% native POS supports Apple Pay, Google Pay, barcode or visual-menu checkout, and automatic discounting with promotional start/end dates.
- Inventory tracking covers receiving through adjustments; FIFO costing and PO generation aren't yet supported.

9 of 9 requirements met

One record. No blind spots.

5.7 REPORTING

Answers in minutes, not a Friday spreadsheet

Giving operators self-service visibility into transactions and performance.

NATIVE

- Native reporting and dashboards give every location self-service visibility without a vendor ticket.
- Transaction search by payment method covers POS today; extending it across all payment types is a near-term enhancement.

30 of 30 requirements met

5.8 COMMUNICATIONS

Reaching members through their preferred channel

Delivering, managing, and tracking member communications across channels.

NATIVE

- Transactional messaging (renewal, billing, past-due, SMS consent) is native, with channel preferences captured per member.
- Self-serve resend and aggregate delivery dashboards aren't yet in M&O; templates are centrally managed today.

7 of 7 requirements met

5.9 CRM

Keep the CRM already in place

Whether a client can use its own CRM, or ours, as the system of record.

NATIVE + API

- CRM is native (Gymsales, moving to Xlerate) plus open API and webhook access to third-party CRMs like HubSpot — the most common client setup today.
- CRM platform migration to Xlerate targets 2027.

8 of 8 requirements met

Built to grow with the business — not around it.

5.10 MOBILE APP

One branded experience, not five app vendors

Branding and driving engagement with the member app experience, end to end.

CONFIGURABLE

- A fully native, configurable white-labeled member app today; clients already run custom apps on our APIs, and a comprehensive turnkey option is possible, not yet built.
- Engagement tracking (workouts, bookings, rewards) runs through Mixpanel; deeper native leaderboards and challenges are on the roadmap for Q3 2026.

15 of 15 requirements met

5.11 PLATFORM STANDARDS

Infrastructure that stays out of the way

What security, architecture, and reliability standards the platform is held to.

NATIVE

- Enterprise-grade security, API architecture, and uptime are native — the same standards underpinning \$14B+ in annual payments for 30K+ operators.
- One unified platform means fewer places for a breach or outage to happen than a multi-vendor stack.

12 of 12 requirements met

5.12 CORPORATE / B2B

Enterprise-ready now, native by H2 2026

Managing corporate hierarchies, enterprise billing, and B2B integrations at scale.

PARTIAL · H2 2026

- Multi-level hierarchies, group billing plans, and portal-based administration are configurable today — about half this requirement set is already live.
- Native invoicing, usage-based billing, and deeper hierarchy automation are committed for H2 2026

16 of 34 available today

Instructors paid right. **Classes always covered.**

5.13 WORKFORCE / PT

Payroll that matches what happened in class

Connecting instructor and staff records, certifications, and payroll across systems.

PARTNER

- Instructor onboarding, certification tracking, performance monitoring, and payroll reconciliation connect through an open API integration with the existing HR/payroll or ERP system.
- That means keeping the current HR and payroll investment instead of migrating to a new one — hours taught and pay reconcile automatically instead of by hand.

31 of 31 requirements met

5.14 SCHEDULING

A class is never left uncovered

Staffing class scheduling, substitutes, and reservation-based activities.

PARTNER

- Native class scheduling and booking pair with partner-delivered workflows for substitutes (via NetGym) and reservation-based activities like court scheduling (via Plan2Play).
- A cancelled instructor or a busy court doesn't turn into a member-facing problem — coverage and booking stay seamless.

43 of 43 requirements met

Full requirement-level detail — Support Level, Availability, and Additional Comments for every one of the 287 rows — is provided in the accompanying RFI workbook.

What's ready now — and what's next.

Across all 287 requirements and 14 categories, the majority are already live. Two areas are in focus — gamified member engagement and extended enterprise capabilities.

ACROSS ALL 14 CATEGORIES

Available today

LIVE NOW

- Billing, payments & collections — 100% native, the same infrastructure processing \$14B+ a year for 30K+ operators.
- Member lifecycle, pricing, check-in, and reporting — native or configurable, consistent across every brand and location.
- Open APIs connect the CRM, mobile app, and payroll tools already in place — no rip-and-replace required.
- Workforce, PT, and group fitness scheduling — connected end-to-end through our partner ecosystem.
- Corporate accounts — multi-level hierarchies, group billing, and portal-based administration — are configurable today.

ROADMAP · 5.10 · 5.12 · 5.14

Coming next

GAMIFIED ENGAGEMENT · Q3 2026

Configurable leaderboards, recurring challenges, and automatic activity capture — built natively into the same member record used for billing and scheduling.

ENTERPRISE DEPTH · H2 2026

Native corporate invoicing, usage-based billing, and deeper multi-level hierarchy automation — extending our enterprise capabilities
