REDSHIFT

TABLEAU

Zenoti is a highly available service with an availability of 99.99%. Designed as a multi-tenant architecture and built by a team that has designed and deployed large-scale systems for many of the Fortune 500

GLOBAL ACCELERATOR

S3

Modern platform components

Components *Identity service, Logging service, API Gateways, L7 Router, Elastic Search*

Regional setup

US East (N. Virginia)

Canada (Central)

Europe (Frankfurt)

UAE

Asia Pacific (Sydney)

Infrastructure updated to handle multiple regions to support data privacy requirements

Handling scale

- Point Of Delivery (POD) model to deliver service to different regions
 - ANZ, South East Asia, India, Middle East, Europe and the Americas
- On-demand scale on stateless server farms
 - Windows Web, API, Signal R, Redis, Notification servers
 - Platform components running on Docker containers in Kubernetes
- SQL Server load distributed to primary, replication and read replicas
 - Can scale up machines, add read replicas, and push loads to replication
- Moving load from SQL Server into micro-services components on managed databases and AWS Elasticsearch

Redundancy

- In each AWS Region, the application layer is distributed across two AWS availability zones
 - L7 routers, Web servers, API gateways, API servers, SignalR servers, and Redis caches
- SQL Server Always On switching for catastrophic failures within the same region
 - RTO (< 15 min) and RPO (< 5 min) Worldwide
- Redundant backups to handle disasters within and outside a specific AWS Region

Cloud security

AWS SHIELD
Protection from DDOS attacks

AWS WAF
Protection against common exploits

AWS GUARD DUTY
For threat detection

TENABLE
For hardening all systems

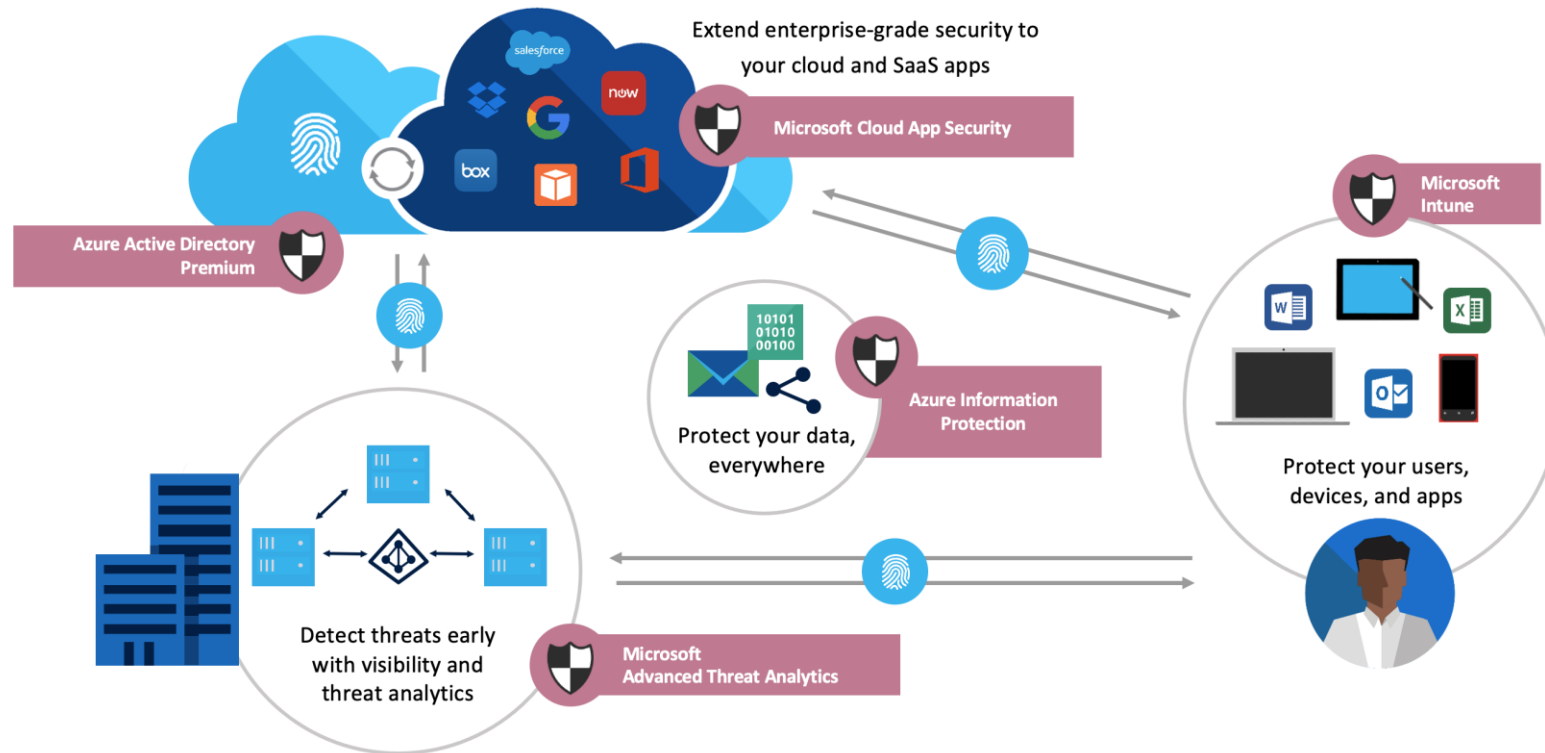

TREND MICRO
Virus/Malware protection and File Integrity
Monitoring

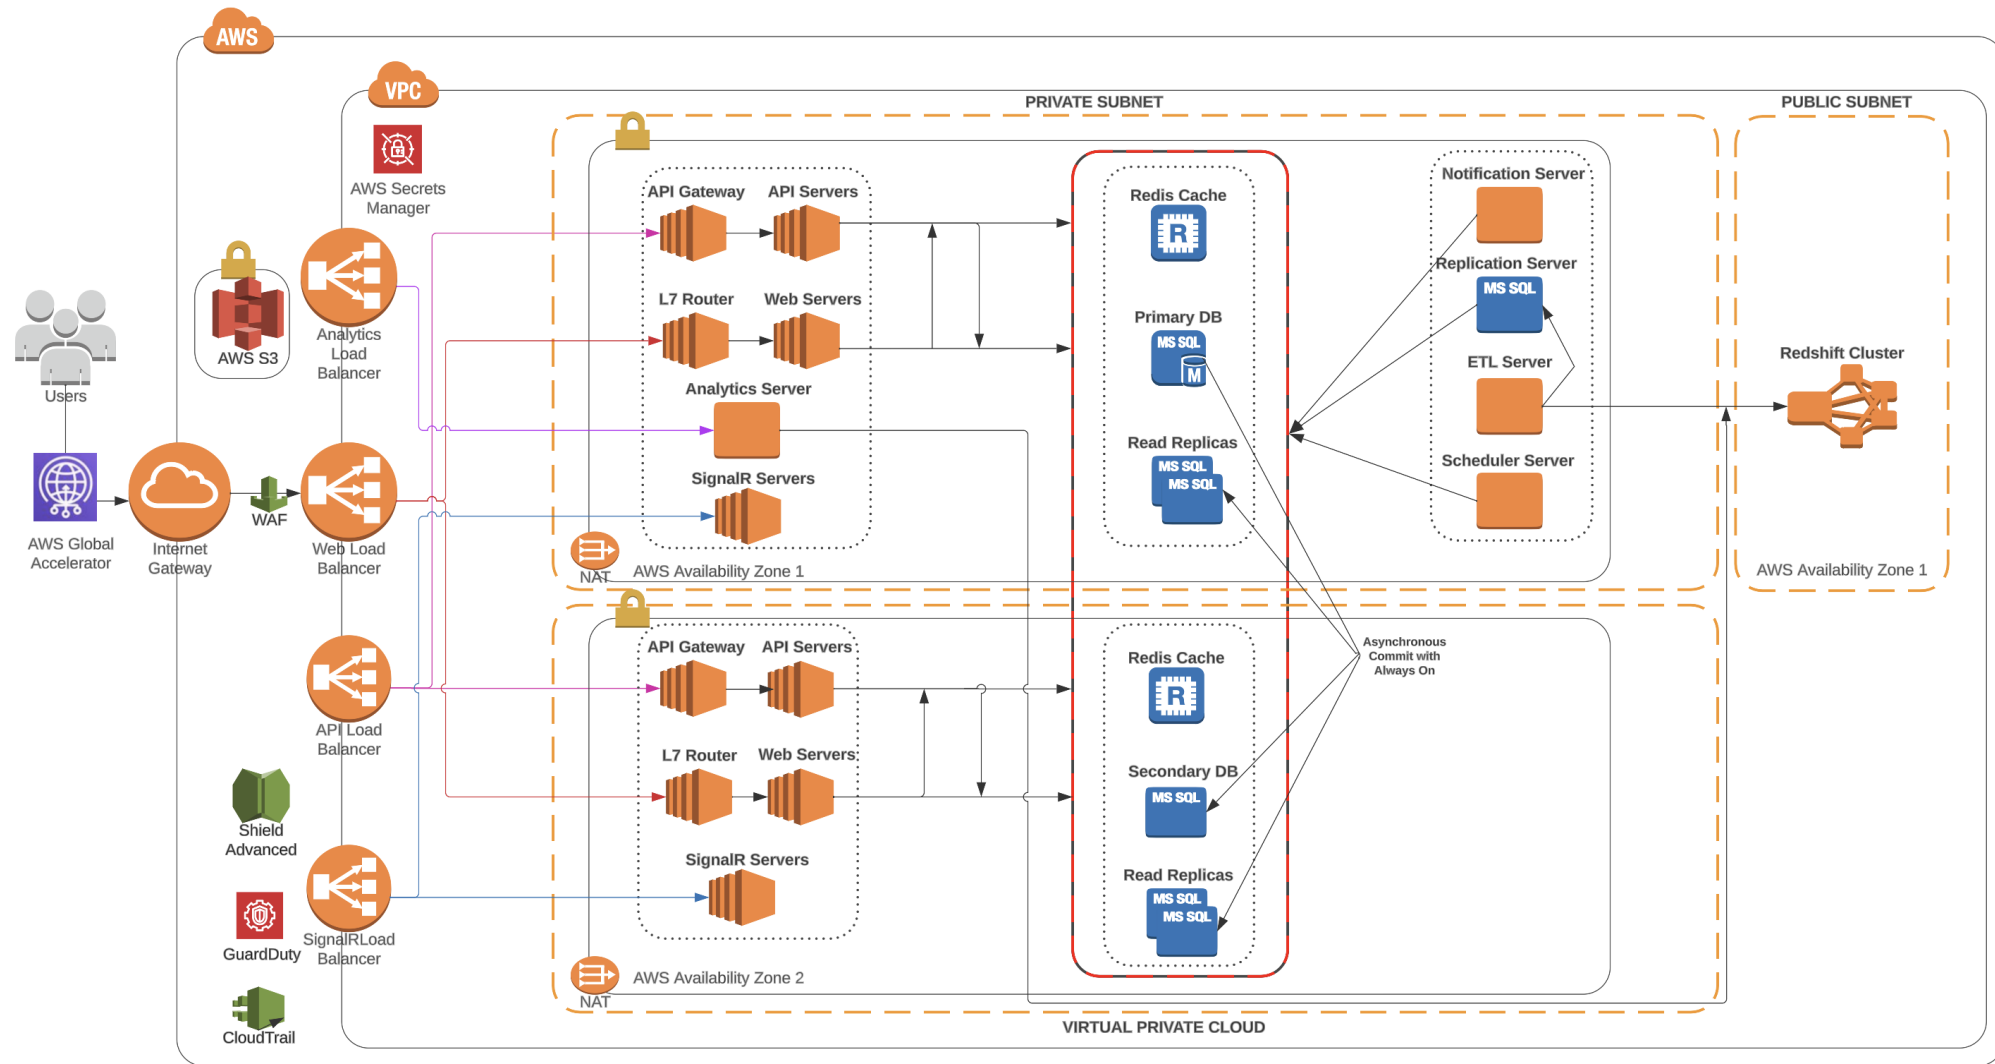

DATADOG
Security Information and Event Management

IT security with M365 E5

Data backups

- SQL Real Time Always On Backup to different AWS Availability Zone
- Types of SQL Backups (within the same AWS region)
 - SQL Full Backup – Once a week (every Sunday)
 - SQL Differential Backup – Every day (except Sunday)
 - SQL Log Backup – Every 15mins
- SQL Backups are encrypted and compressed
- SQL Backups are stored in highly redundant AWS S3 (encrypted) storage for 3 years
- AWS Cross Region Backup via SQL Transactional Log Shipping

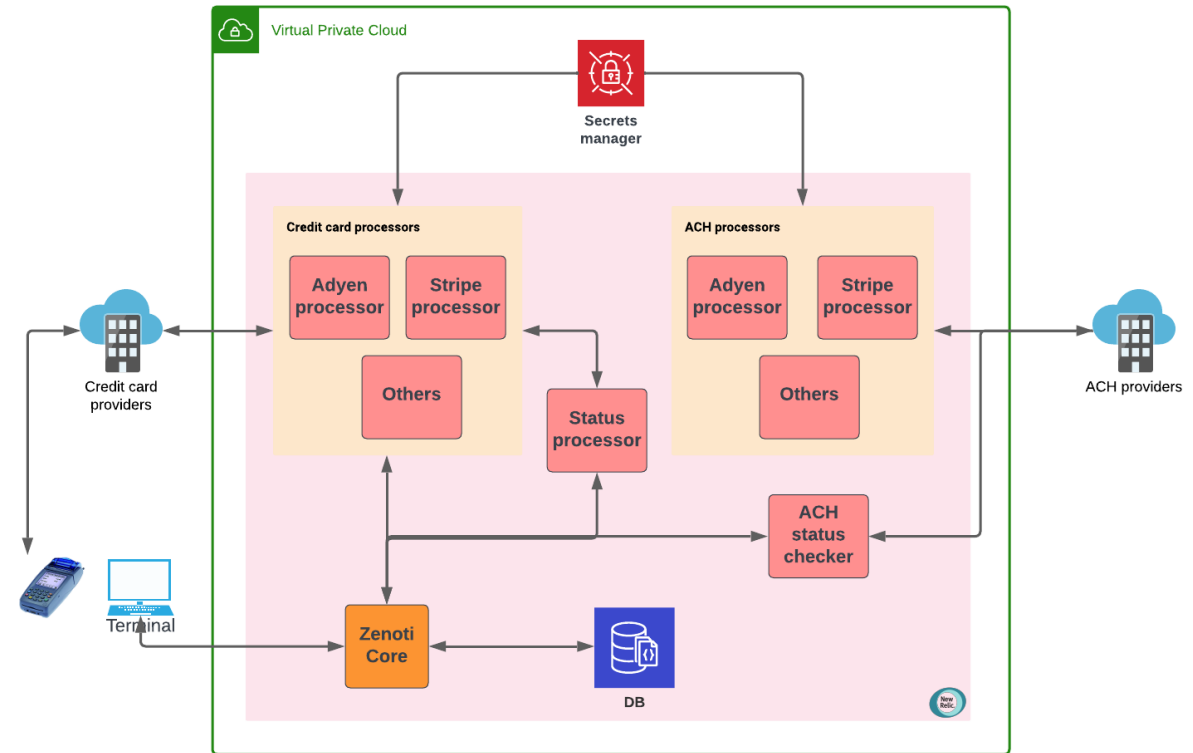

Telemetry

- Zenoti Data lake built to analyse adoption & performance metrics
 - Build using AWS S3 + QuickSight + Glue + AWS batch jobs
 - Data from Product + JIRA + Intercom + Salesforce + Zuora + AskNicely + other systems flow into this daily

Payments

- Reliable and scalable architecture
- Integrated payment experience for guests and front desk
- Supports multiple providers for CC and ACH processing
- PCI DSS compliant

Messaging

- Reliable and scalable architecture sending 200 million+ messages every month
- Multi-channel communication (Text, email, push)
- 2-way text support for confirmation
- Transactional and marketing messaging support
- Opt-in process of text messages – complying with mandatory regulations
- Worldwide text messaging optimization with many in-country providers

Browser and mobile

iOS

Localized interface

Consumer Ux **LIVE**

Online booking, Kiosk, messages, forms, and consumer facing data

Front Desk **LIVE**

Front desk management, mobile applications, provider applications

Administration **LIVE**

Setup and administrative features

Supports French and Spanish

Trust center

The screenshot shows a web browser at the URL <https://trust.zenoti.com>. The page header features the Zenoti logo and the text "Trust & Compliance Center". To the right of the header are "Share" and "Subscribe" buttons. Below the header is a search bar labeled "Search items". The main content area is divided into two columns. The left column, titled "Overview", contains a welcome message and information about Zenoti's commitment to data privacy and security. The right column, titled "Compliance", displays a grid of certification logos with green checkmarks indicating compliance: CCPA, GDPR, HIPAA, PCI DSS, PIPEDA, SOC 1, and SOC 2.

EXTENDING ZENOTI

Building extensibility

REDSHIFT

S3

A need of enterprise and now mid-market customers, Zapier makes this easier

Analytics using Redshift

- Redshift is a fully managed petabyte-scale data warehouse service in the cloud, optimized for columnar data reads that make it very fast for analytical computations of large data sets.
- Zenoti Redshift Schema
 - Fact and Dimension tables for all key objects in Zenoti
 - Consolidated (de-normalized) tables for easy reporting using BI tools
 - Schema backward compatibility for customer use cases
 - Evolved model to perform delta-sync to Redshift tables
 - Fact and Dimension tables support a delta-sync into customer data lakes
 - The reconciliation framework runs every day to ensure data quality

Building data lakes

Analytics data sources

API coverage

Organization and Center

Details about the business and objects associated to centers including rooms and employees

Guests

Searching for guests, guest management, forms, appointments, opportunities and associated objects

Billing Operations

Billing, booking and management. Actions on associated objects like products, packages, memberships and gift cards

Employees

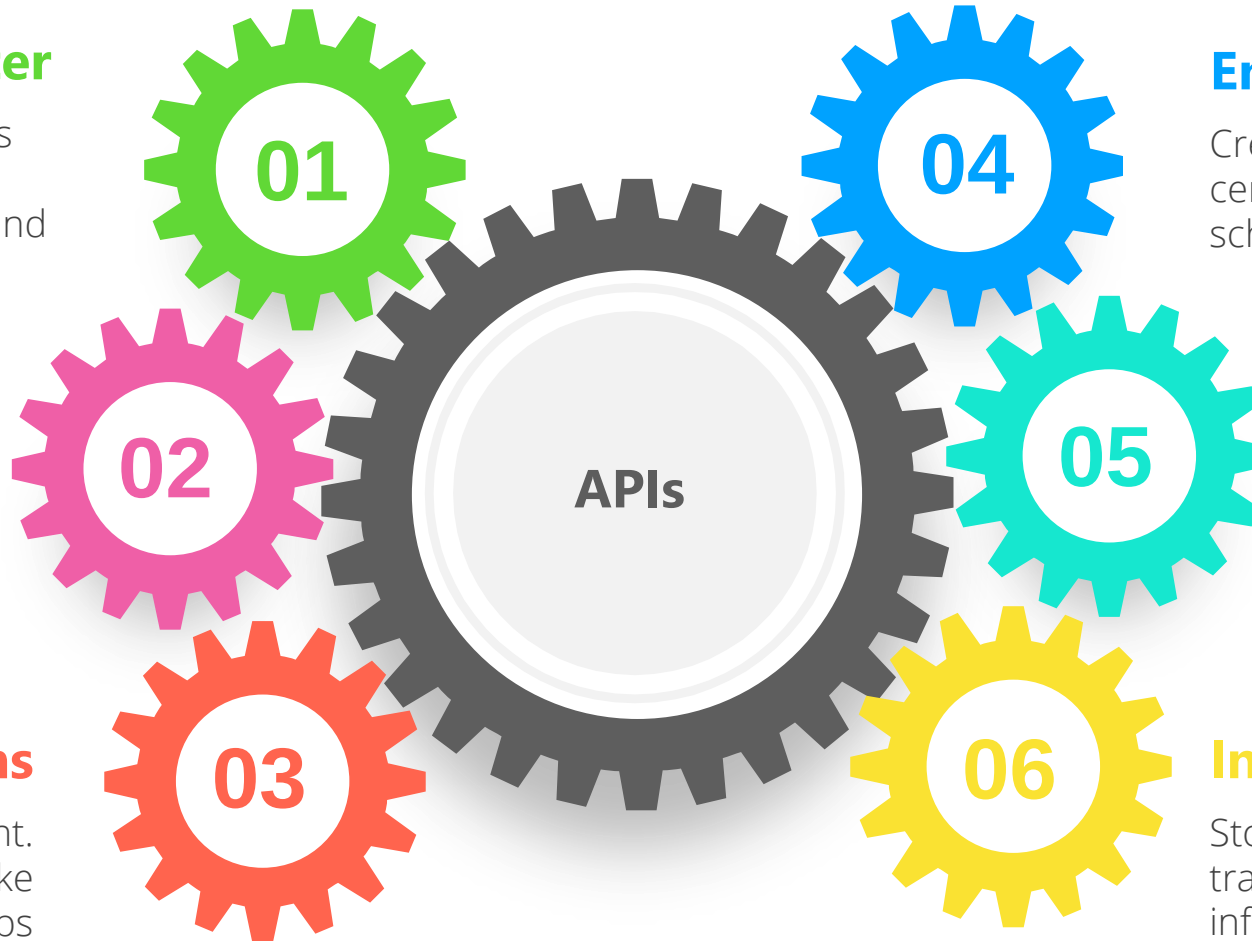

Create-update employees, assign center level roles, set/update schedules

Classes

Guest details and registrations, enrolments, membership operations

Inventory

Stock, consumption, purchase orders, transfer orders and vendor information.

API use examples

Mobile Apps

Building mobile apps to book services, sell memberships, register for classes and manage accounts

Lead Gen & Call Centers

End to end workflows to manage a call center to respond to campaigns and convert guests to buying packages and memberships

01

02

04

03

Booking Experiences

Special booking and buying experiences for medspa's that sell packages

Integrations

Integrations with e-commerce, CRM, accounting, inventory, and other corporate systems

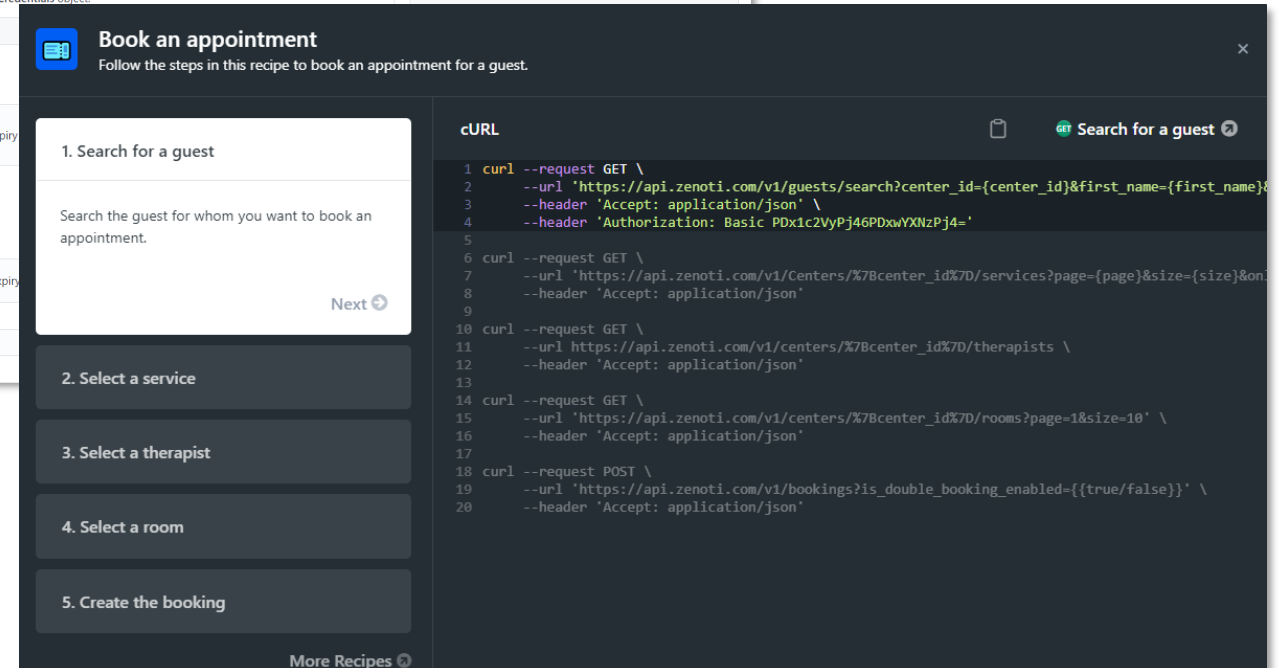

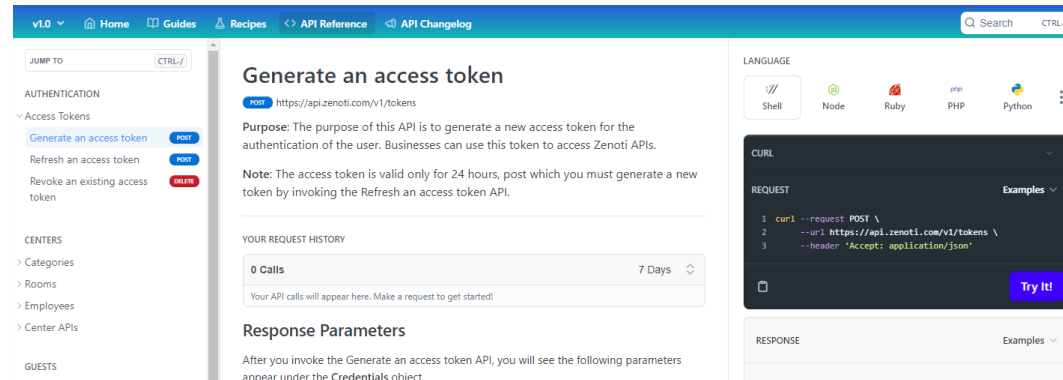

API documentation

Built using Readme

Recipes for easier adoption

- Wizard-like approach
- Collection of APIs
- Organised in sequence

CONFIDENTIAL

Webhooks coverage

Extend using APIs and webhooks

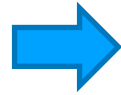

Use Zapier to integrate Zenoti with thousands of apps

With Zapier, build automated workflows between Zenoti and other apps such as Hubspot, ActiveCampaign, and many more.

Facebook leads to Zenoti

Businesses use Facebook
for lead generation

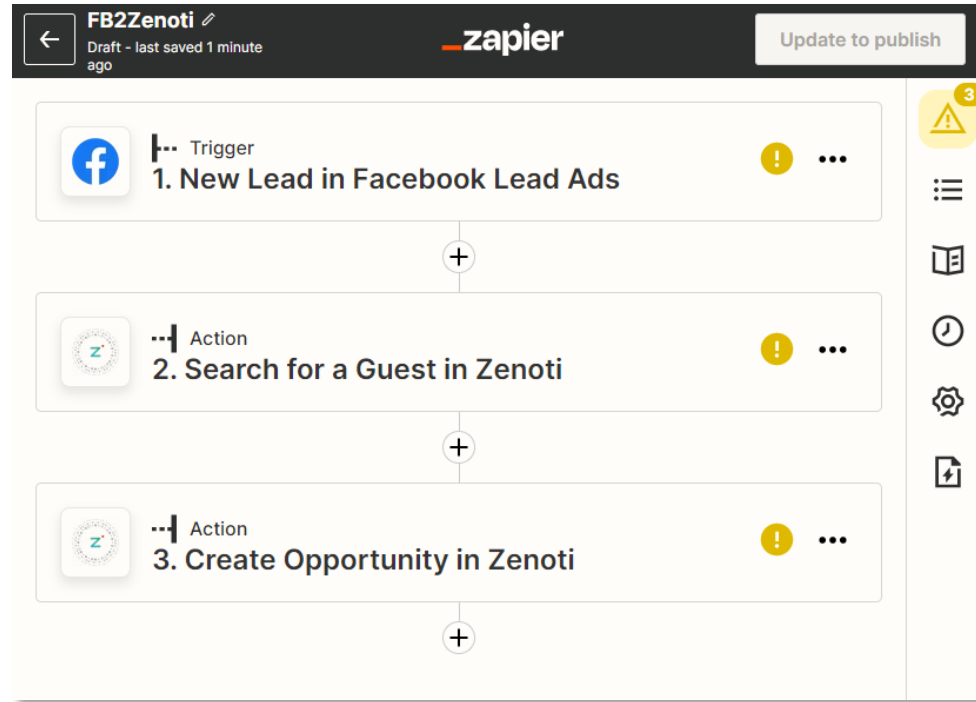

Leads generated in Facebook are
recorded as opportunities in Zenoti

Use Sales module to track
conversion

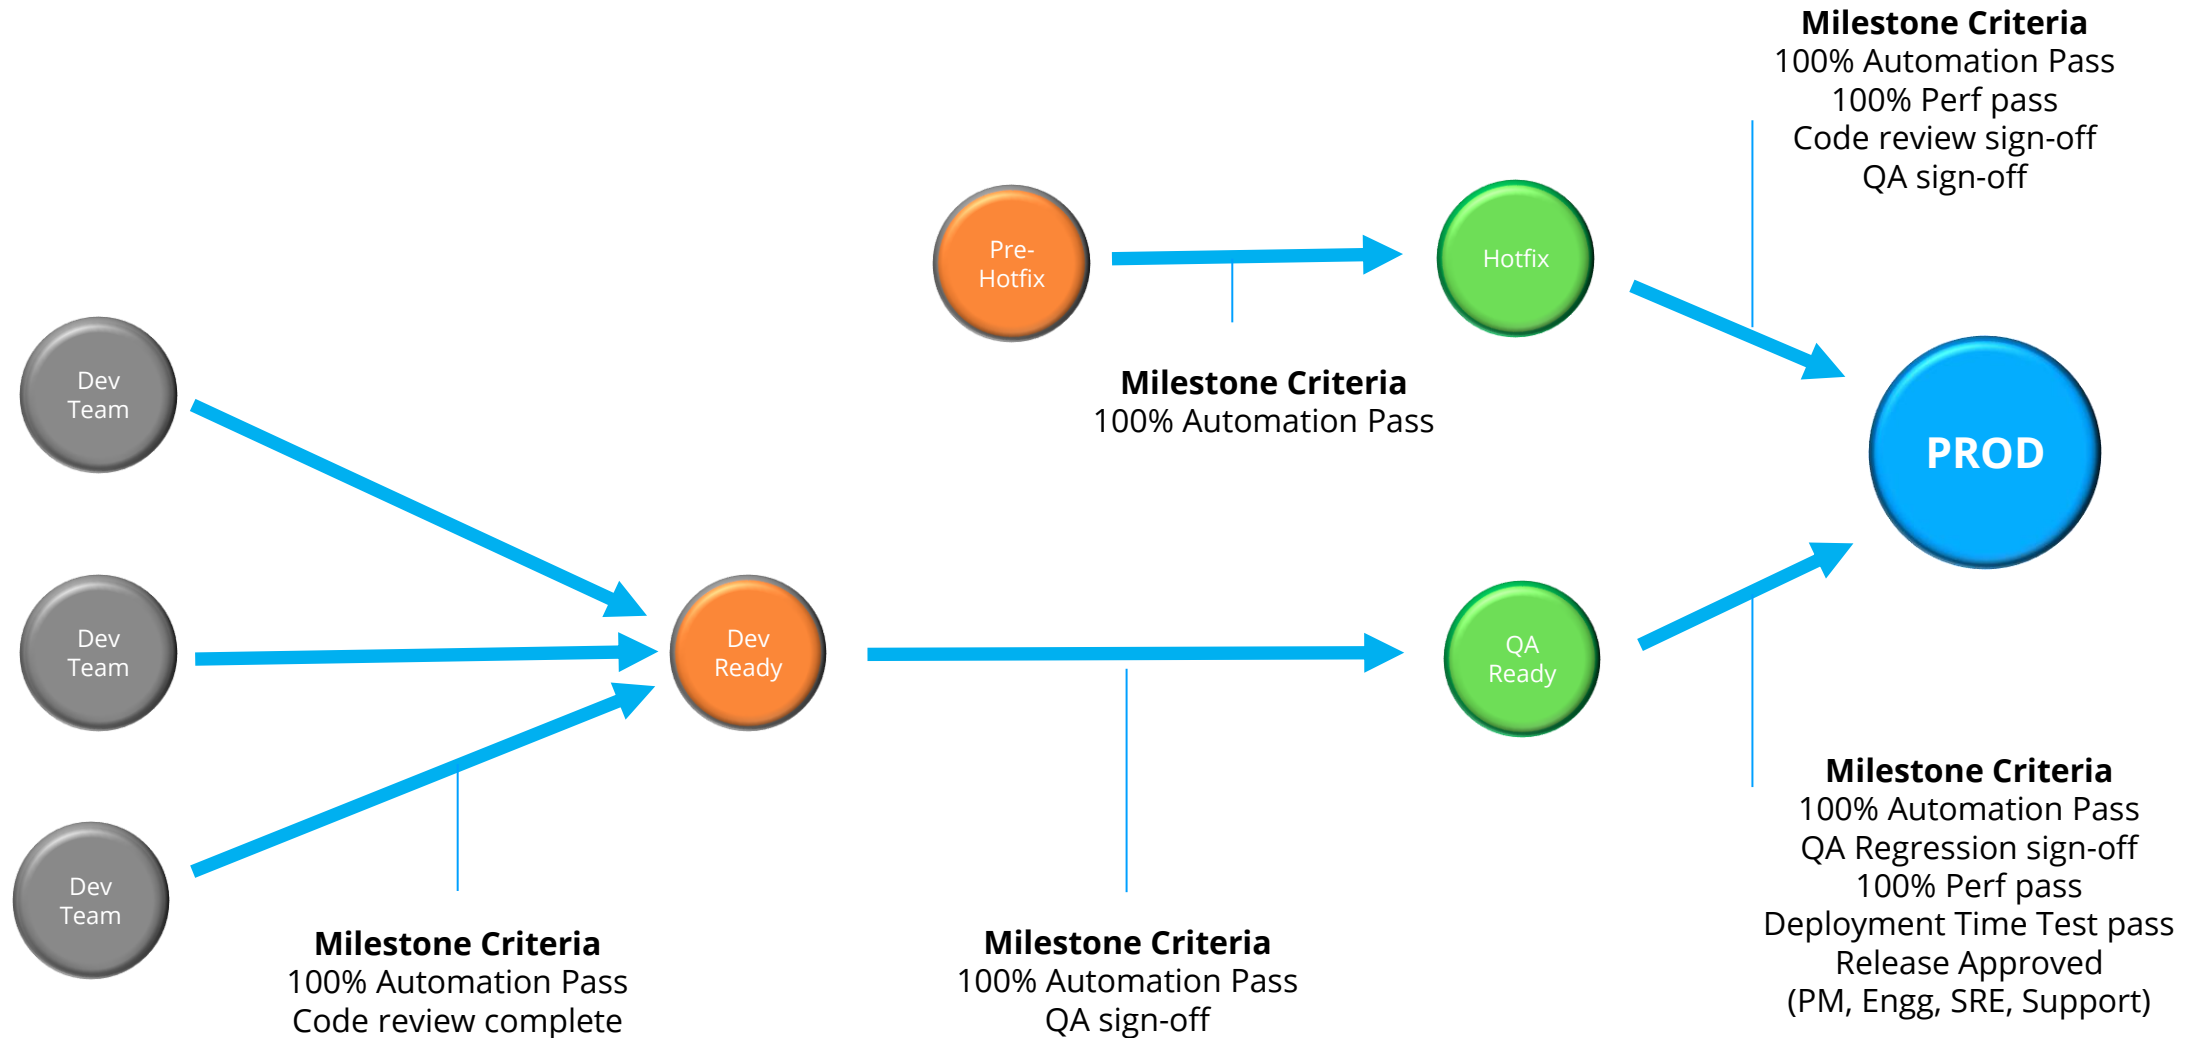

Using Zapier templates (Zaps)

Helps you setup the Facebook leads to Zenoti opportunities integration in minutes, without writing code
